QUIZ 18

What's a point-biserial correlation? Phi? Cramer's V?

What are some of the weaknesses in the gun control / gun violence analyses?
(I talk about this in both Lecture 17 and Lecture 18.)

You want to examine whether a database will permit trustworthy analyses.
(Are the data distributed in such a way that sound analyses will come from it?)
What analysis do you run in SPSS?

What do you look for in the results?

What is skewness (and what are positive and negative skew)?
What is kurtosis (and what are platykurtic and leptokurtic)?

What is a linear regression? What kind of dependent variable does it require?
