QUIZ 8

In what study design do you calculate “relative risk”?

In what study design do you calculate an “odds ratio”?

What is the “aim of epidemiology”? (It’s on the slide with the picture of pollution that says “Aim of epidemiology” at the top.)

What did we learn from the mummies?

What did we learn from the Neil Pearce article?
(Hint: “Shift in the...”; he says it twice).
Why is this (potentially) a problem?

What did we learn from the epidemiological studies on hormone replacement therapy, vitamin E, coffee, tea, etc.?

What does “proof” mean?

What’s the Karl Popper quotation? (You don’t need to explain its meaning...)
